

Final Year Project Report

on

“E-FYPQA ”

Submitted by

Riya Mehetar – 21203A0008

Sathvika Adep – 21203A0044

Shravani Mangela – 21203A0067

Under the guidance of

Prof. Sudhir Lawand

Head of the Department

Prof. Vijay Patil

Department of Computer Engineering

Vidyalankar Polytechnic Wadala (E), Mumbai – 400 037
Maharashtra State Board of Technical Education, Mumbai

(2023-2024)

Institute Vision

To achieve excellence in imparting **Technical Education** so as to meet the Professional and Societal needs.

Institute Mission

- Developing **technical skills** by imparting knowledge and providing hands on experience.
- Creating an environment that nurtures **ethics, leadership and team building.**
- Providing **industrial exposure** for minimizing the gap between academics & industry.

Program Vision

To empower students with domain knowledge of Computer Engineering and interpersonal skills to cater to the industrial and societal needs.

Program Mission

M1: Encouraging academic excellence and a passion for learning through the use of learner-oriented teaching methodologies.

M2: Providing an environment that inculcates ethics and effective soft-skills and focuses on the development of learners.

M3: Establishing and reinforcing a symbiotic institute-industry interface so that learners can gain exposure to real-life applications of Information Technology.

Program Education Objectives

PEO1: To empower the students to apply their knowledge of various domains and cultivate a habit of life-long learning in them.

PEO2: To develop the students' overall personality and thereby encourage just social behaviour in the student.

Program Outcomes

Basic and Discipline specific knowledge: Apply knowledge of basic mathematics, science and engineering fundamentals and engineering specialization to solve the engineering problems.

Problem analysis: Identify and analyse well-defined engineering problems using codified standard methods.

Design/ development of solutions: Design solutions for well-defined technical problems and assist with the design of systems components or processes to meet specified needs.

Engineering Tools, Experimentation and Testing: Apply modern engineering tools and appropriate technique to conduct standard tests and measurements.

Engineering practices for society, sustainability and environment: Apply appropriate technology in context of society, sustainability, environment and ethical practices.

Project Management: Use engineering management principles individually, as a team member or a leader to manage projects and effectively communicate about well-defined engineering activities.

Life-long learning: Ability to analyse individual needs and engage in updating in the context of technological changes.

Program Specific Outcomes

PSO1: Computer Software and Hardware Usage: Use state-of-the-art technologies for operation and application of computer software and hardware.

PSO2: Computer Engineering Maintenance: Maintain computer engineering related software and hardware systems.

Certificate

This is to certify that the following students

Riya Mehetar
Sathvika Adep
Shravani Mangela

Have completed the Project on
E-FYPQA

A partial fulfilment of the requirement of Third Year Diploma in Computer Engineering affiliated to Maharashtra State Board of Technical Education, Mumbai for the Academic Year 2023-24.

Internal Examiner

External Examiner

Project Guide

Head of Department

Principal

Acknowledgement

This project is a huge team effort. My team and I extend our deepest gratitude and thanks to the following people who have helped us to achieve our work.

Special thanks to our project guide Prof. Sudhir Lawand for guiding us and helping in time when we needed most. We got to learn many things from him, and it was our pleasure to work with him. My team and I extend thanks to the faculties of our college whom we have approached for academic help with regards to our project. We also would like to thank our HOD Prof. Vijay Patil and Principal Dr. Ashish Ukidve for their support and guidance.

(**Riya Mehetar**)
(**Sathvika Adep**)
(**Shravani Mangela**)

Abstract

This application aims to develop an E-FYPQA. This application will help FYPQA committee in student's final year project management. It will contain all the information, guidelines and notices regarding the final year projects. It will have admin, guide and student login. Admin will manage guide and student. Guide will be able to see only those groups allocated to them and uploaded Synopsis, Black book and videa by each student from each group. Students will be able to see the guide allocated to them and can be able to upload and download their project related works.

This application aims to build a single platform for FYPQA committee to have ease of project development work between students and guides. This application will help students to interact with their guides and digitalize their documents.

4.	Flow Chart of the System	15,16,17
5.	Entity Relationship Diagram of the System	18

CHAPTER 1

INTRODUCTION

1.1 PROBLEM DEFINITION:

- Students and guide face a significant problem in managing final year project related documents such as synopsis, black book, ppt, videasp, etc. So, this software will digitalize all the work like students can download and upload their project related work, guide can view students work and admin can manage students and guide like adding, updating and deleting students and guides.
- It provides students with a convenient online platform to present their projects, submit their black book, documents, videos, and other relevant materials in a digital format, replacing the need for traditional hardcopy submissions. Guide and students will have their login id to upload or check the submissions.
- The E-FYPQA system surpasses existing project submission methods by offering a comprehensive online platform.
- Unlike traditional hardcopy submissions, it streamlines the process, reduces paperwork, and enhances communication with features like project tracking, automated feedback, and collaborative tools.
- This modern solution provides a more efficient and user-friendly experience for students and faculty, significantly improving the existing approach.
Students, faculty guides, and educational institutions will benefit from the E-FYPQA system's efficiency and convenience.

1.2 INITIAL INVESTIGATION:

- A Final Year Project Quality Assurance (E-FYPQA) system is a comprehensive digital platform designed to streamline the entire process of final year project submission and evaluation.
- It provides students with a convenient online platform to present their projects, submit their black book, documents, videos, and other relevant materials in a digital format, replacing the need for traditional hardcopy submissions.
- Guide and students will have their login id to upload or check the submissions.
- Furthermore, the E-FYPQA system goes beyond just document submission, offering an array of additional features aimed at enhancing the experience for both students and faculty guide.
- By transitioning the final year project process into a digital format, the E-FYPQA system not only reduces paperwork but also provides a more efficient, transparent, and user-friendly experience for all involved parties.
- This digital transformation is especially beneficial in a world increasingly reliant on online and remote technologies, making the final year project submission and evaluation process more accessible and manageable.

1.3 SCOPE OF THE PROJECT:

- The scope of our project, "E-FYPQA" (Final Year Project Quality Assurance System), is to make sure that the project we're working on is done really well and meets all the requirements.
- We'll create a plan to check every step of the project to make sure it's done right.
- This includes understanding what needs to be done, making a plan to do it correctly, using the right tools to keep track of our progress, testing everything to find any problems, and fixing them quickly.

CHAPTER 2

REVIEW OF LITERATURE

❖ **Learning PHP, MySQL & JavaScript: A Step-by-Step Guide to Creating Dynamic Websites, Sixth Edition (Grayscale Indian Edition) Book**

MySQL Database: Database fundamentals, SQL queries, designing and managing databases, and integrating MySQL with PHP.

- The book aims to provide a comprehensive understanding of MySQL as a database solution and how it seamlessly integrates with PHP for building dynamic and interactive websites. Readers can expect hands-on examples and real-world scenarios to reinforce their knowledge and skills in working with MySQL databases within a web development context.
- Practical examples and step-by-step guides on integrating MySQL with PHP for dynamic web applications. This includes connecting to a MySQL database from PHP, executing SQL queries within PHP code, and handling data retrieved from the database.

Responsive Design and User Experience: Techniques for designing websites that adapt to various devices and enhancing user experience give short review on this topic from the book in short note

- This section equips readers with the knowledge and practical skills needed to design and implement responsive websites that prioritize user experience. The emphasis on real-world application within the Indian context enhances the relevance of the techniques discussed. It's a valuable resource for web developers aiming to create modern, user-friendly interfaces that cater to the diverse device landscape.

❖ **PHP AND MYSQL: SERVER-SIDE WEB DEVELOPMENT by Jon Duckett-**

- The author takes you through setting up your development environment, explains PHP and MySQL concepts, and shows you how to connect them to create interactive websites. You'll learn about handling form data, managing user sessions, and even building a basic Content Management System (CMS).
- The book is beginner-friendly, but it might not delve deeply into advanced topics. It's a good starting point, especially if you prefer a visually engaging and hands-on approach to learning web development with PHP and MySQL. Keep in mind to check for the latest edition for the most current information.

CHAPTER 3

PLAN OF WORK

Fig: 3.1 Gantt chart

3.1 SOFTWARE DEVELOPMENT LIFE CYCLE:

SDLC is a process followed for a software project, within a software organization. It consists of a detailed plan describing how to develop, maintain, replace and alter or enhance specific software. The life cycle defines a methodology for improving the quality of software and the overall development process.

SDLC usually begins with determining customer business needs, which is followed by implementation and testing. The cycle ends when all requirements have been fulfilled.

The System Development Life Cycle (SDLC) has five phases: The Planning phase, the Analysis phase, the Design phase, the Implementation phase and the Maintenance Planning of the SDLC.

Requirement Analysis:

- This phase involves gathering detailed requirements from stakeholders such as the FYPQA committee, administrators, guides, and students. This includes understanding their needs, objectives, functionalities required, and constraints of the system.

System Design:

- This phase involves designing the system architecture, database schema, user interfaces, and functionalities based on the gathered requirements. It includes creating detailed technical specifications and selecting appropriate technologies for implementation.

Implementation:

- Actual coding and development of the E-FYPQA application take place in this phase. Developers implement the design specifications using chosen programming languages, frameworks, and tools. Features such as admin, guide, and student login, file upload/download functionalities, and database interactions are developed and integrated.

Testing:

- Once development is complete, the system undergoes rigorous testing to identify and fix any defects or bugs. This includes unit testing, integration testing, system testing, and user acceptance testing (UAT) to ensure that the application meets the specified requirements and functions correctly.

Deployment:

- After successful testing, the E-FYPQA application is deployed to a production environment where it can be accessed by users. This involves setting up servers, databases, and necessary infrastructure, and configuring the system for optimal performance and security.

Maintenance and Support:

- Post-deployment, the application requires ongoing maintenance and support to address any issues, add new features, and ensure smooth operation. Regular updates, patches, and enhancements may be released based on user feedback and changing requirements.

1. Process Model

There are different types of models used by a software team to do their work systematic that is step by step. The original process models have certainly given a guidance or roadmap for the whole software development process or software engineering.

The process models are properly structured so that at least structure of the process can be understood. The different process models are:

- Waterfall Model
- Incremental Model
- RAD Model
- Prototype Model
- Spiral Model

We have chosen the **Waterfall Model** for development of our project.

2. WATERFALL MODEL

The waterfall model is a breakdown of project activities into linear sequential phases, where each phase depends on the deliverables of the previous one and corresponds to a specialization of tasks. The approach is typical for certain areas of engineering design. In software development, it tends to be among the less iterative and flexible approaches, as progress flows in largely one direction ("downwards" like a waterfall) through the phases of conception, initiation, analysis, design, construction, testing, deployment and maintenance.

Fig: 3.2 Waterfall Model

Following is a detailed phase-wise explanation of how waterfall model was used in developing the project:

Requirements Analysis:

- Description of the system requirements: The application aims to develop an E-FYPQA system for managing final year projects.
- Identification of user roles: Admin, guide, and student.
- Specification of features: Authentication, user management, project allocation, document management, communication tools, notifications, dashboard, reporting, guidelines, notices, and data security.

System Design:

- Design of the user interface: User-friendly interface for admin, guides, and students.

- Architecture design: Backend infrastructure for authentication, document storage, and communication features.

Implementation:

- Development of authentication and user management functionalities.
- Implementation of project allocation system.
- Creation of document management features including upload, download, and access controls.
- Integration of communication tools such as messaging or commenting systems.
- Implementation of notifications and alerts system.
- Development of dashboard and reporting functionalities.
- Creation of guidelines and notices repository.
- Implementation of data security measures.

Testing:

- Testing of each feature to ensure functionality and reliability.
- Verification of user roles and permissions.
- Testing of document management, communication, and notification systems.
- Evaluation of dashboard and reporting accuracy.
- Security testing to ensure data protection measures are effective.

Deployment:

- Release of the E-FYPQA application to production environment.
- Configuration and setup of the application on servers.
- User training and onboarding for admin, guides, and students.
- Transition from development to operational phase.

Maintenance:

- Regular updates and maintenance to address user feedback and bug fixes.
- Monitoring and optimization of system performance.
- Implementation of new features or enhancements based on evolving requirements.
- Continuous improvement of the application based on user experience and changing needs.

CHAPTER 4

SYSTEM REQUIREMENTS

4.1 HARDWARE REQUIREMENTS:

Name of the component	Specification
Processor	Intel(R) Core(TM) i5-6200U , 11th Gen Intel(R) Core(TM) i3-1115G4 @ 3.00GHz 3.00 GHz
RAM	8GB

4.2 SOFTWARE REQUIREMENTS:

Name of the component	Specification
Operating System	Windows 10
Language	PHP
Database	MySQL
Browser	Chrome
Code Editor	VS code and notepad++
Webserver	XAMPP server

CHAPTER 5

DESIGNING

5.1 USE CASE DIAGRAM:

Fig: 5.1 Use case diagram

5.2 FLOWCHART:

Fig: 5.2.a Flow chart

Guide

Fig: 5.2.b Flow chart

Student

Fig: 5.2.c Flow chart

5.3 ER Diagram:

Fig: 5.3 ER Diagram

CHAPTER 6

MODULE DESCRIPTION

MODULE DISCRIPTION:

- There are three users involved in the system, the users are student who upload the document, the guide who will view the uploaded documents, the admin who will administrate the web application.

Admin

- To be able to create, update and solve query in order to manage system.
- To be able to view project material.
- To be able to download project material.
- To be able to send notifications.
- To be able to remove Student/ Guide.
- To be able to generate report.

Guide

- To be able to register as part of user.
- To be able to login.
- To be able to upload project material.
- To be able to view project material.
- To be able to download project material.
- To be able to view notifications.

Student

- To be able to register as a part of system.
- To be able to login properly.
- Should be able to upload project material.
- To be able to view project material.
- To be able to ask question through the system.
- View notifications.

CHAPTER 7

TESTING

7. TESTING:

Software testing is a process, to evaluate the functionality of a software application with an intent to find whether the developed software met the specified requirements or not and to identify the defects to ensure that the product is defect free in order to produce the quality product.

7.1 TEST CASES

Admin

TC no.	Test case	Input data	Expected output	Actual output	Status
1	Login (Username and password is correct)	Enter valid username: Manisha Enter valid password: 1234	It should redirect to the home page of admin.	It redirected to the home page of admin.	Pass
2	Login (Username and password is incorrect)	Enter valid username: Manisha Enter valid password: “ “	It should show pop up message “Enter valid username or password”.	It should showed pop up message “Enter valid username or password”.	Pass

CHAPTER 8

FEATURES AND APPLICATIONS

8.1 ADVANTAGES:

- E-FYPQA website can provide clear and transparent guidelines on the submission process, including important dates, requirements, and expectations. This reduces confusion and helps students understand what is expected of them.
- The website includes a submission portal where students can upload their project work. This portal is secure, user-friendly, and support the submission of various file types.
- By providing comprehensive information and resources online, the website can reduce the administrative burden on staff.

8.2 APPLICATIONS:

- FYPQA finds application in educational institutions, transforming how final year projects are managed.
- Students benefit from easy digital submissions and improved guidance. Faculty guides experience streamlined evaluation and communication.
- Administrators gain insights into project quality.
- Ultimately, FYPQA elevates the quality and efficiency of final year projects in academic.

CHAPTER 9

FUTURE SCOPE

9.1 FUTURE SCOPE:

- The future scope of E-FYPQA is vast and includes widespread adoption in colleges and schools worldwide.
- It aims to make the project submission process more efficient and accessible for students and educators.
- E-FYPQA can become a standard tool, benefiting education by enhancing quality assurance, reducing paperwork, and supporting learning in diverse settings.

Admin Home page slider dropdown

The screenshot shows the E-FYPQA Admin Home Page. On the left, there is a dark sidebar with a menu icon at the top. Below it, under 'GUIDE', are 'Create Guide', 'Credentials', 'Add Project Guide', 'Update Project Guide', and 'Delete project guide'. Under 'STUDENT', the options are 'Create Student', 'Credentials', 'Allocate Student', 'Update Student', 'Delete Student', and 'Allocate Groups'. At the top right of the main content area, the text 'E-FYPQA' and 'Home Page - ADMIN' is displayed. Below this is a green navigation bar with links for 'About', 'Documents', 'View Groups', 'Guides', and 'Students'. The main content area contains a welcome message: 'Welcome to the E-FYPQA Admin Home Page! This website provides a platform for guiding students through their Final Year Projects (FYPs) with a focus on quality assurance. Explore the navigation bar and slide bar to access different sections of the website.' There is also a small illustration of a computer monitor and two mobile phones. At the bottom of the page, a green footer bar displays the text 'Developed by Riya Meheter, Sathvika Adepu, Sharavni Mangle - Diploma in Computer Engineering Final Year Project - 2024'.

About page

The screenshot shows the 'About E-FYPQA Application' page. The background features a stylized illustration of four people in blue jackets. The central figure has arms crossed and is looking towards the right. The text 'About E-FYPQA Application' is prominently displayed in green. Below it, the text reads: 'This application aims to develop an E-FYPQA. It will help the FYPQA committee in managing students' final year projects by providing information, guidelines, and notices. It will have admin, guide and student login. Admin will manage guide and student. Guide will be able to see only those groups allocated to them and uploaded Synopsis, Black book and videos by each student from each group. Students will be able to see the guide allocated to them and can be able to upload and download their project related works.' At the bottom, a green footer bar displays the text 'Developed by Riya Meheter, Sathvika Adepu, Sharavni Mangle - Diploma in Computer Engineering Final Year Project - 2024'.

CHAPTER 11

CONCLUSION

11. CONCLUSION:

- The Final Year Project Quality Assurance (E-FYPQA) system revolutionizes project submission and evaluation in education.
- It streamlines the process, replacing hardcopy submissions with an efficient digital platform.
- It enhances communication, automates feedback, and offers valuable insights.
- E-FYPQA makes the final year project experience more convenient for students, guides, and administrators.

E-F YPQA

Riya Mehetar¹, Sathvika Ade², Shravani Mangela³, Prof. Sudhir Lawand⁴

CO, Vidyalankar Polytechnic, Mumbai

ABSTRACT :

This application aims to develop an E-FYPQA. This application will help FYPQA committee in student's final year project management. It will contain all the information, guidelines and notices regarding the final year projects. It will have admin, guide and student login. Admin will manage guide and student. Guide will be able to see only those groups allocated to them and uploaded Synopsis, Black book and videa by each student from each group. Students will be able to see the guide allocated to them and can be able to upload and download their project related works.

This application aims to build a single platform for FYPQA committee to have ease of project development work between students and guides. This application will help students to interact with their guides and digitalize their documents.

INTRODUCTION :

PROBLEM DEFINITION

- Students and guide face a significant problem in managing final year project related documents such as synopsis, black book, ppt, videa, etc. So, this software will digitalize all the work like students can download and upload their project related work, guide can view students work and admin can manage students and guide like adding, updating and deleting students and guides.
- It provides students with a convenient online platform to present their projects, submit their black book, documents, videos, and other relevant materials in a digital format, replacing the need for traditional hardcopy submissions. Guide and students will have their login id to upload or check the submissions.
- The E-FYPQA system surpasses existing project submission methods by offering a comprehensive online platform.
- Unlike traditional hardcopy submissions, it streamlines the process, reduces paperwork, and enhances communication with features like project tracking, automated feedback, and collaborative tools.
- This modern solution provides a more efficient and user-friendly experience for students and faculty, significantly improving the existing approach. Students, faculty guides, and educational institutions will benefit from the E-FYPQA system's efficiency and convenience.

SCOPE OF PROJECT

- The scope of our project, "E-FYPQA" (Final Year Project Quality Assurance System), is to make sure that the project we're working on is done really well and meets all the requirements.
 - We'll create a plan to check every step of the project to make sure it's done right.
 - This includes understanding what needs to be done, making a plan to do it correctly, using the right tools to keep track of our progress, testing everything to find any problems, and fixing them quickly.
-

PLAN OF WORK :

PROCESS MODEL: WATERFALL MODEL

The waterfall model is a breakdown of project activities into linear sequential phases, where each phase depends on the deliverables of the previous one and corresponds to a specialization of tasks. The approach is typical for certain areas of engineering design. In software development, it tends to be

among the less iterative and flexible approaches, as progress flows in largely one direction ("downwards" like a waterfall) through the phases of conception, initiation, analysis, design, construction, testing, deployment and maintenance.

Requirements Analysis:

- Description of the system requirements: The application aims to develop an E-FYPQA system for managing final year projects.
- Identification of user roles: Admin, guide, and student.
- Specification of features: Authentication, user management, project allocation, document management, communication tools, notifications, dashboard, reporting, guidelines, notices, and data security.

System Design:

- Design of the user interface: User-friendly interface for admin, guides, and students.
- Architecture design: Backend infrastructure for authentication, document storage, and communication features.

Implementation:

- Development of authentication and user management functionalities.
- Implementation of project allocation system.
- Creation of document management features including upload, download, and access controls.
- Integration of communication tools such as messaging or commenting systems.
- Implementation of notifications and alerts system.
- Development of dashboard and reporting functionalities.
- Creation of guidelines and notices repository.
- Implementation of data security measures.

Testing:

- Testing of each feature to ensure functionality and reliability.
- Verification of user roles and permissions.
- Testing of document management, communication, and notification systems.
- Evaluation of dashboard and reporting accuracy.
- Security testing to ensure data protection measures are effective.

Deployment:

- Release of the E-FYPQA application to production environment.
- Configuration and setup of the application on servers.
- User training and onboarding for admin, guides, and students.
- Transition from development to operational phase.

Maintenance:

- Regular updates and maintenance to address user feedback and bug fixes.
- Monitoring and optimization of system performance.
- Implementation of new features or enhancements based on evolving requirements.
- Continuous improvement of the application based on user experience and changing needs.

➤ USECASE DIAGRAM

FEATURES AND APPLICATIONS :**ADVANTAGES:**

- E-FYPQA website can provide clear and transparent guidelines on the submission process, including important dates, requirements, and expectations. This reduces confusion and helps students understand what is expected of them.
- The website includes a submission portal where students can upload their project work. This portal is secure, user-friendly, and support the submission of various file types.
- By providing comprehensive information and resources online, the website can reduce the administrative burden on staff.

APPLICATIONS:

- FYPQA finds application in educational institutions, transforming how final year projects are managed.
- Students benefit from easy digital submissions and improved guidance. Faculty guides experience streamlined evaluation and communication.
- Administrators gain insights into project quality.
- Ultimately, FYPQA elevates the quality and efficiency of final year projects in academic.

FUTURE SCOPE :**FUTURE SCOPE:**

- The future scope of E-FYPQA is vast and includes widespread adoption in colleges and schools worldwide.
- It aims to make the project submission process more efficient and accessible for students and educators.
- E-FYPQA can become a standard tool, benefiting education by enhancing quality assurance, reducing paperwork, and supporting learning in diverse settings.
