HTML, JavaScript (Basic), CSS

PROJECTS

BUS RESERVATION SYSTEM   JAVA

This system will have two separate modules, Admin and User the admin can delete the reservations, user and buses and can add new buses into the system while the customer can add their reservation and check their Reservation details.

CRICKET SCORE BOARD   C#

It uses file management to store data such as runs, wickets, overs and extras among others. The program can display runs, wickets, batsman and bowler names, overs, bonuses, bowlers' economy, batsman's strike rate and other statistics. It also shows the start and end time of the game.

HOSPITAL MANAGEMENT SYSTEM   C++

This C++ program manages a hospital with details like the hospital name, doctor, in-patient, and out-patient information. It uses a hybrid inheritance structure. Users can input and view hospital, in-patient, and out-patient data, demonstrating the program's flexibility in handling various aspects of hospital management.
